Abstract

Here we summarize the known distributional data for the Hawaiian *Scatella* (Ephydriidae). We report on four new island records; *S. amnica* and *S. stagnalis* from Kauai, *S. oahuense* from Lanai, and *S. terryi* from Maui. A list of material present, comprising over 3100 individual specimen records in the collections of the Bernice Pauahi Bishop Museum, University of Hawaii at Manoa, and Essig Museum of Entomology at UC Berkeley is included, along with details distributional maps for the Hawaiian endemic species.

Keywords

Hawaiian Islands, Diptera, Ephydriidae, *Scatella*, distributions, new island records

Introduction

Diptera research in Hawaii dates to the latter part of the 18th century when RCL Perkins was employed to survey the terrestrial biota of the Hawaiian Archipelago (Evenhuis 2007). Subsequent research by Sweezy, Bryan, Williams, Cresson, Wirth, Hardy and others greatly expanded the number of endemic species and refined our understanding of their relationships (reviewed in Zimmerman and Liebherr 2001). The senior author's laboratory

has been collecting Hawaiian Diptera for the past 15 years in order to elucidate the patterns and processes involved in the impressive radiations seen in these lineages in the Hawaiian Islands. We have amassed a large amount of fine-scale distributional data and new island records for many species and this is the second in a series of papers on the taxonomy and distribution of endemic Hawaiian Diptera. The current paper reports four new island records from the genus *Scatella* (Diptera: Ephydridae) and provides a comprehensive catalog of the available material in the Bernice Pauahi Bishop Museum (BPBM), University of Hawaii at Manoa (UHM), and Essig Musuem of Entomology at UC Berkeley (EMEC).

Ephydridae, or the shore flies, is a cosmopolitan family of ecologically diverse acalyptrate Diptera, with 2000 species placed in five subfamilies (Mathis and Zatwarnicki 1995, Pape et al. 2011). Most ephydrids are aquatic or semi-aquatic, but some genera have adapted to harsh environments and can survive in high elevations, sulfurous hot springs, highly alkaline or saline lakes, and even in pools of crude petroleum (Evenhuis 2008, Foote 1995). Many ephydrids are beneficial and provide food for wildlife, such as migratory birds (Wirth et al. 1987). Others are agricultural pests, mining in the stems or leaves of watercress, rice, barley, and other irrigated cereals (Grigarick 1959). The majority of native Hawaiian ephydrids are placed in the cosmopolitan genus *Scatella*, a group containing a total of 135 species (Brown 2010). *Scatella* is widespread in the Pacific basin and it has been recorded from Hawaii, French Polynesia, Western Samoa, Australia, New Zealand, and Easter Island (<http://hbs.bishopmuseum.org/aocat/aocathome.html>). There are 17 Hawaiian species (Table 1), 15 of which are endemic (Nishida 2002). *Scatella* has a complex taxonomic history, particularly in Hawaii. Tenorio (1980) classified these taxa in three separate genera (*Scatella*, *Neoscatella*, and *Apulvillus*), but they have since been combined into the same genus. Ten species are found on multiple islands and only five (*cinereifacies*, *kauaiensis*, *williamsi*, *wirthi*, and *femoralis*) are single island endemics (Nishida 2002).

Table 1.
Distribution of *Scatella* species in Hawaii. Status indicates whether the species are endemic (E), introduced (I) or adventive (A). Islands sampled are: Kauai (K), Oahu (O), Molokai (Mo), Lanai (L), Maui (Ma), and Hawaii (H). Presence of a species on a given island is designated by an X. An asterisk denotes a new island record for the species. There are two species with records in the Northwest Hawaiian Islands: *S. sexnotata* (1) has also been recorded from Nihoa, Necker and Laysan, *S. stagnalis* (2) is known from Midway.

Materials and methods

Literature and specimen review

We have reviewed the literature for the Hawaiian *Scatella* and have attempted to include infomation on both the taxonomic history of the species and all occurrences of the endemic taxa in the literature, including the original descriptions, subsequent revisions, additional descriptive notes, range expansions and new island records and catalogs. We list the primary type, paratypes and other material examined. We include all records from the EMEC and the BPBM. Additional material deposited in the National Museum of Natural History, Smithsonian Institution (USNM) and the UHM are also presented here. All museum abbreviations conform to Evenhuis (2014).

Collection methods

All material was obtained from general sweeping of vegetation, seeps and streams. Samples were preserved in 95% ethanol (ETOH) and transported to UC Berkeley for identification and subsequent molecular work. The key and descriptions in Tenorio (1980) were used to identify the Hawaiian *Scatella*. Vouchers for all species were preserved in 95% ETOH and are deposited in the BPBM and EMEC.

Species distribution maps

Distribution maps for each species were produced by combining literature records and the senior author's collections during the past 15 years. Historical collections, shown in red, were georeferenced based on known place names and collection localities. These localities may not be exact but will give the reader some notion of the distribution of these taxa. Placemarks in the .kml file (Suppl. materials 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15) are named by the collector and the year of collection. Two widespread species, *S. sexnotata* and *S. stagnalis*, were not mapped. These taxa are very common in agricultural

settings (irrigation ditches, greenhouses, etc.) and in aquatic habitats close to human habitation. More recent collections, shown in white, were georeferenced using a Garmin Oregon 450 GPS unit.

Checklist of *Scatella* species found in the Hawaiian Islands

Scatella amnica (Tenorio, 1980)

Native status: Endemic.

Distribution: Hawaiian Islands: Maui, Hawaii.

Discussion

Although Ephydriidae represent only a small percentage of the Diptera diversity present in the Hawaiian Islands, these taxa are notable for exploiting aquatic environments ranging from marine to brackish swamps to high-elevation freshwater streams. Hawaiian *Scatella* feed on algae and microorganisms, and can be found in a range of habitats, from stagnant water in the lowlands or clean fast-running mountain streams (Tenorio 1980). Larvae of species inhabiting swift-flowing streams possess strong spines on the posterior spiracular tubes that enable the larvae to cling onto substrates of algae and rocks so they would not be dislodged by the rushing water (Tenorio 1980). In contrast, larvae of species that inhabit calm, stagnant waters do not exhibit these spines, but instead have palmate “hydrofuge” hairs surrounding the posterior spiracular openings (Tenorio 1980). When these species forage for food on the water surface, the palmate hairs spread out over the water, break the water tension, and allow the spiracles to have direct contact with the air (Tenorio 1980). It is possible that many species of *Scatella*, because of their ancestral ability to tolerate saline environments, can disperse across the ocean channels surrounding the main Hawaiian Islands. Because different species tend to exhibit different morphological characteristics and occupy different niche when they exist in the same area, *Scatella* may be another example of adaptive radiation, albeit a smaller example, in Hawaii.

Thirteen of the 17 species we treat here are widespread and found on multiple islands. This is similar to what is seen in the endemic crane flies (*Dicranomyia*; Goodman and O'Grady 2013, Nitta and O'Grady 2008) and may be a general pattern for aquatic taxa with tolerance to salt water environments and a correspondingly higher dispersal ability than those species without such adaptations. Four species in the genus *Scatella*, *S. cinereifacies*, *S. fluvialis*, *S. kauaiensis*, and *S. terryi*, are single island endemics. Three of these are found at high elevations in association with fresh water, suggesting that dispersal ability has been lost or is much reduced in these species. Of the single island endemics, only *S. terryi* is found at lower elevations in association with salt water. There are only a few known collection records of this species, all of which were made prior to 1950. It is possible that it exists on other islands but has never been collected because it is rare. It is also possible that this is truly a narrow endemic and may have been driven to the point of extinction by human activity. Many of these are in areas that are subject to high use by humans (e.g., Hanauma Bay, Waimanalo, Koko Crater). Additional collections are needed to fully assess the status of this taxon.

Acknowledgements

We would like to thank Torsten Dikow and the curatorial staff at the United States National Museum for assistance with the USNM collections. This work was supported by NSF DEB 0842308 to PM O'Grady.

Supplementary materials

Suppl. material 1: Distribution of *Scatella amnica*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. amnica*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_amnica.kml - [Download file](#) (14.58 kb)

Suppl. material 2: Distribution of *Scatella bryani*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. bryani*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_bryani.kml - [Download file](#) (12.45 kb)

Suppl. material 3: Distribution of *Scatella cilipes*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. cilipes*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_cilipes.kml - [Download file](#) (36.09 kb)

Suppl. material 4: Distribution of *Scatella cinereifacies*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. cinereifacies*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_cinereifacies.kml - [Download file](#) (11.57 kb)

Suppl. material 5: Distribution of *Scatella clavipes*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. clavipes*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_clavipes.kml - [Download file](#) (16.02 kb)

Suppl. material 6: Distribution of *Scatella femoralis*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. femoralis*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_femoralis.kml - [Download file](#) (1.67 kb)

Suppl. material 7: Distribution of *Scatella fluvialis*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. fluvialis*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_fluvialis.kml - [Download file](#) (3.14 kb)

Suppl. material 8: Distribution of *Scatella hawaiiensis*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. hawaiiensis*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_hawaiiensis.kml - [Download file](#) (62.14 kb)

Suppl. material 9: Distribution of *Scatella kauaiensis*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. kauaiensis*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_kauaiensis.kml - [Download file](#) (23.00 kb)

Suppl. material 10: Distribution of *Scatella mauiensis*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. mauiensis*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_mauiensis.kml - [Download file](#) (9.53 kb)

Suppl. material 11: Distribution of *Scatella oahuense*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. oahuense*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_oahuense.kml - [Download file](#) (34.82 kb)

Suppl. material 12: Distribution of *Scatella terryi*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. terryi*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_terryi.kml - [Download file](#) (5.98 kb)

Suppl. material 13: Distribution of *Scatella warreni*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. warreni*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_warreni.kml - [Download file](#) (50.69 kb)

Suppl. material 14: Distribution of *Scatella williamsi*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. williamsi*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_williamsi.kml - [Download file](#) (8.34 kb)

Suppl. material 15: Distribution of *Scatella wirthi*

Authors: PM O'Grady

Data type: occurrence

Brief description: Distribution of *S. wirthi*. Samples with GPS coordinates shown in white; georeferenced historical samples shown in red.

Filename: S_wirthi.kml - [Download file](#) (16.55 kb)
